

HEAT-STYLING WITH A CURLING IRON

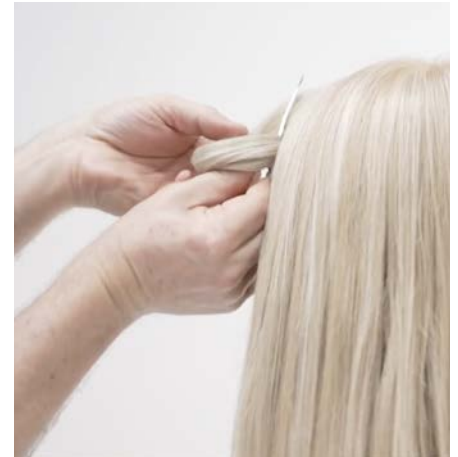

Blow-dry it. Curl it. Straighten it. OWN IT! EnvyHair's built-in moisture-control withstands temperatures UP TO **285°F (140°C)**—allowing you to make the style your own.

Secure your wig to a form with 2" T-pins, making sure **NOT TO PUNCTURE** any Lace or Monofilament material. When curling EnvyHair™, make sure that your iron is set **NO HIGHER THAN 285°F (140°C)**.

Spray fibers first with a **HEAT PROTECTANT** then curl the desired section as you normally would.

Once released, clip each section on the **INSIDE BEND** of the curl to prevent indentations from the clips.

Have hair properly placed before drying/cooling. You can leave clipped sections to **AIR-DRY** or use your blow-dryer's **COOL SHOT BUTTON** to cool hair down.
